

ABSTRACT OF THE DISCLOSURE

A hydraulically operated braking system including a master cylinder having a pressurizing piston operatively connected to a brake operating member, to pressurize a fluid in a pressurizing chamber, so that a brake cylinder is actuated by the pressurized fluid, and an assisting device for applying to the pressurizing piston an assisting drive force which is different than a primary drive force to be applied to the pressurizing piston on the basis of a brake operating force acting on the brake operating member. The assisting device is electrically controllable to control the assisting drive force.
